JavaScript

From Wikipedia, the free encyclopedia
(Redirected from [Javascript](#))

*Not to be confused with [Java \(programming language\)](#), [Java \(software platform\)](#), [JScript](#), or [Javanese script](#).
For the uses of JavaScript on Wikipedia, see [Wikipedia:Javascript](#).*

JavaScript (/ˈdʒɑːvəˌskript/^[6], often abbreviated as **JS**, is a [programming language](#) that conforms to the [ECMAScript](#) [scripting language](#) level, often [just-in-time compiled](#), and [multi-paradigm](#). It has curly-bracket syntax, [dynamic typing](#), [prototype-based object model](#), and [asynchronous function calls](#).

Alongside [HTML](#) and [CSS](#), JavaScript is one of the core technologies of the [World Wide Web](#).^[8] JavaScript enables interactivity, and is an essential part of [web applications](#). The vast majority of [websites](#) use it for [client-side](#) page behavior,^[9] and all major [web browsers](#) have a [JavaScript engine](#) to execute it.

As a multi-paradigm language, JavaScript supports [event-driven](#), [functional](#), and [imperative programming styles](#). It has [APIs](#) for working with text, dates, [regular expressions](#), standard [data structures](#), and the [Document Object Model](#) (DOM). It does not include any [input/output](#) (I/O), such as [networking](#), [storage](#), or [graphics](#) facilities, as the host environment (usually a web browser) provides these APIs.

JavaScript engines were originally used only in web browsers, but they are now embedded in some [servers](#), usually via [Node.js](#) or [Deno](#), in a variety of applications created with [frameworks](#) such as [Electron](#) and [Cordova](#).

Although there are similarities between JavaScript and [Java](#), including language name, [syntax](#), and respective [standard libraries](#), they are distinct and differ greatly in design.

Kindle 21,60 USD	Taschenbuch ab 19,98 \$
Lesen Sie mit unserer kostenfreien App	16 gebraucht ab 19,98 \$ 26 neu ab 24,47 \$

Completely revised and updated, this best-selling introduction to programming in JavaScript focuses on applications.

JavaScript lies at the heart of almost every modern web application, from social apps like Twitter to browser-based Phaser and Babylon. Though simple for beginners to pick up and play with, JavaScript is a flexible, complex language to build full-scale applications.

BORDELLBETREIBER SIND SAUER

«Alle dürfen wieder arbeiten, ausser wir»

Betreiber von Erotikbetrieben fühlen sich unfair behandelt, weil sie noch nicht öffnen dürfen. Sie werkeln an Schutzkonzepten und machen Druck auf den Bundesrat.
